ABOUT ME

As a **seasoned web development professional** with a decade of industry experience and over a year specializing in **Web3 technologies**, I lead front-end development at **Tenderize.me**. My expertise encompasses crafting sleek, responsive web interfaces using **React.js, Next.js, TypeScript, and Tailwind CSS**. I excel in **agile methodologies**, collaborating seamlessly with IT and business teams to deliver innovative solutions. My diverse background spans multiple platforms—including web, mobile, and widgets—enabling me to approach challenges with a fresh perspective and develop cutting-edge decentralized applications (dApps).

EDUCATION

Bachelor of Technology,
Punjab Technical
University
2011

SKILLS

WORK EXPERIENCE

Front End Lead, Tenderize, Berlin

Oct 2023 - Present

As the **Front-End Lead at Tenderize.me**, I specialize in developing advanced web interfaces that seamlessly integrate functionalities from both the **Ethereum** and **Solana** blockchain ecosystems. Utilizing a robust tech stack, I ensure our decentralized applications (dApps) are high-performing, and user-friendly.

Tech Stack:

- **Frontend Development:** React.js, Next.js, TypeScript, Tailwind CSS
- **Ethereum Integration:** Wagmi, Viem, React Query
- **Solana Integration:** Solana Web3.js, Program IDs
- **Data Indexing:** The Graph
- **Ethereum Integration:**
 - **Token Management:** Implementing features to handle ERC-20 token interactions, including balance inquiries and transaction executions.
 - **State Management:** Employing React Query to manage asynchronous data fetching and caching, ensuring efficient and responsive UI updates.
 - **Blockchain Communication:** Utilizing Wagmi and Viem to establish secure and efficient connections with Ethereum smart contracts, facilitating seamless user interactions.
- **Solana Integration:**
 - **Program Interaction:** Managing Solana blockchain transactions by interfacing with on-chain programs through their unique program IDs, enabling functionalities such as token transfers and state updates.
 - **Data Fetching:** Creating custom hooks to fetch on-chain data, ensuring efficient state management within the React application.
- **Data Indexing and Analytics:**
 - Leveraging The Graph to index and retrieve key metrics like Total Value Locked (TVL) and transaction volumes, providing users with real-time insights into platform performance.
- **User Experience and Interface Design:**
 - Designing and implementing intuitive user interfaces using React.js and Tailwind CSS, ensuring a seamless and engaging user experience across the platform.
- **Performance Optimization:**
 - Optimizing dApp performance through code splitting, lazy loading, and efficient state management techniques, ensuring fast load times and responsive interactions.

Front End lead Developer, Snubes, Berlin Area

Jul 2018 - Sep 2023

As a **Front-End Lead** at my previous company, I was responsible for architecting and developing **scalable hybrid applications** using **Next.js and React.js**, leveraging both

LANGUAGE

English

server-side rendering (SSR) and client-side rendering (CSR) for optimal performance. I utilized **TypeScript** for robust type safety and maintainability, while **Gatsby** served as a static site generator, seamlessly integrating with **GraphQL** to fetch data from the CMS. I also spearheaded the development of **micro front-ends** using a **Monorepo architecture**, effectively managing dependencies and shared components with **Lerna & NX**. To ensure consistency and efficiency, I designed and implemented a **single source of truth for the design system and documentation**, leveraging **Storybook** for UI component development and **TypeDoc** for comprehensive documentation of the codebase. Additionally, I established rigorous **testing strategies**, incorporating **Jest & Enzyme** for unit testing and **Cypress** for end-to-end (E2E) testing, ensuring high-quality, reliable front-end applications.\

Tech Stack:

- 🔗 **React.js, Next.js, Gatsby**
- 📦 **Node.js (as a package manager), Lerna, NX**
- 🔗 **GraphQL (for internal API integrations)**
- ✅ **Jest, Enzyme (unit testing), Cypress (E2E testing)**
- 📖 **Storybook, TypeDoc (documentation & design system management)**

My role focused on building **scalable, high-performance front-end solutions**, driving **code quality, maintainability, and innovation** in the development process.

Senior Frontend Developer, Ticketmaster, Gurgaon

May 2017 - Jul 2018

As a **Senior Front-End Developer**, I specialized in building **interactive and high-performance web applications** with a focus on **3D layouts using Three.js** within a **React-based single-page application (SPA)**. I streamlined the **build and deployment process** using **Webpack** as a task runner and leveraged **Python scripts** to dynamically generate **SEO-friendly pages**. Working in an **Agile environment**, I participated in **daily stand-ups** and led **bi-weekly sprint meetings**, fostering team collaboration and continuous improvement.

Tech Stack & Responsibilities:

- 🌐 **Three.js** – Created immersive **3D layouts** within a **React SPA**.
- ⚡ **JavaScript + FlowType** – Ensured **static type checking** for improved code quality.
- ⚙️ **Webpack** – Managed the build process and optimized asset bundling.
- 🔄 **Agile Development** – Actively contributed to **stand-ups, sprint planning, and retrospectives**. My role was centered on building **visually rich, performant, and scalable front-end applications**, ensuring seamless integration between the **frontend and backend** while driving innovation in **3D web experiences**. 🚀

Frontend Developer, Jade Global, Noida

Jan 2015 - Apr 2017

As a **Full Stack Developer** for **Sapient's client Jato Flex Software**, I played a key role in developing and maintaining robust web applications, utilizing a diverse tech stack across **frontend, backend, and database layers**. On the **frontend**, I worked extensively with **Angular 1.x** and **jQuery**, optimizing UI performance and enhancing the user experience. To enable **real-time data updates**, I leveraged **WebSockets and Web Workers**, ensuring seamless and dynamic data flow. Additionally, I developed a **Progressive Web App (PWA)** to enable **offline functionality**, improving reliability and user engagement. On the **backend**, I worked with **C# and SQL**, designing and optimizing **database queries** to handle high-performance data processing. I also integrated **Webhooks and Web Workers** to facilitate **dynamic content updates** without compromising performance. For **build automation and code quality**, I utilized **Grunt, Bower, Yeoman, and NPM**, streamlining the development workflow. I also worked with **Tomcat** for deploying and managing backend services.

My role was focused on **developing scalable, real-time applications**, ensuring **high performance, maintainability, and seamless user experience** while handling **both frontend and backend** responsibilities. 🚀

Frontend Developer, Tata Consultancy Services, Gurgaon

May 2014 - Jan 2015

- Worked as a Front End Developer and worked for McKinsey & Company Home client.
- Created a Single Page Application using Angular.js 1.x version.
- Responsive website design using HTML5, CSS3, Media Queries, Sass and Twitter Bootstrap.
- Developed Chart based applications using chart libraries like Highchart and D3.

Frontend Developer, Grange Management Services Pvt Ltd, Delhi

Jan 2013 - Apr 2014

- Worked as Full Stack Developer.
- CMS Website development using C# and ASP.net.
- Created and Maintained Webservices for accepting and generating XML and JSON request.
- Involve in the development of server pages and form validations using JavaScript/jQuery.
- Maintained database using SQL Server 2005/2008.
